DETAILED ACTION

1. Claims 1-10, 14-19, 21-25, 29-39, 43-53, and 57 are pending in this office action.

Allowable Subject Matter

- 2. Claims 1-10, 14-19, 21-25, 29-39, 43-53, and 57 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach receiving a spoofing selection parameter for specifying a rule for applying the spoofing parameters, maintaining a profile that contains the spoofing selection parameter, and compensating for a maximum segment size mismatch by resizing the data segments based on the profile.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Craig Plastrik (U.S. Reg. No. 41,254) on May 4, 2007.

Claim 44. (Currently amended). A computer-readable <u>storage</u> medium carrying one or more sequences of one or more instructions for routing information in a communication system that comprises a platform and a spoofing apparatus configured to perform a plurality of performance enhancing functions, the one or more sequences of one or more instructions comprising instructions which, when executed by one or more processors, cause the one or more processors to

receiving the information from the platform and one or more spoofing parameters and a spoofing selection parameter for specifying a rule for applying the spoofing parameters, wherein the spoofing parameters include information for specifying whether spoofing is enabled for a selected one of the connections and priority information specifying priority treatment of the selected connection, wherein the spoofing apparatus maintains a profile that contains the spoofing selection parameter and the spoofing parameters; and to route the information in accordance with the profile, the profile including a maximum segment size; and

compensate for maximum segment size mismatch between the selected connection and a connection to an end host by dynamically resizing, based on the profile, data segments which comprise the information before forwarding the data segments to the end host.

Claim 45. (Currently amended). The computer-readable storage medium of claim 44, further comprising: determining a path that the information takes to reach its destination based on the profile.

Claim 46. (Currently amended). The computer-readable <u>storage</u> medium of claim 45, further comprising: determining the path by applying spoofing rules.

Claim 47. (Currently amended). The computer-readable <u>storage</u> medium of claim 45, wherein the path is determined based on connection control blocks.

Claim 48. (Currently amended). The computer-readable <u>storage</u> medium of claim 47, wherein connection control blocks are allocated using a hash function.

Claim 49. (Currently amended). The computer-readable <u>storage</u> medium of claim 47, wherein connection control blocks are allocated using a mapping table.

Claim 50. (Currently amended). The computer-readable <u>storage</u> medium of claim 46, wherein the spoofing rules are mapped to the profile.

Claim 51. (Currently amended). The computer-readable <u>storage</u> medium of claim 44, further comprising: receiving the at least one of spoofing selection parameters and spoofing parameters as a data structure from the platform.

Claim 52. (Currently amended). The computer-readable <u>storage</u> medium of claim 44, further comprising: receiving at least one of spoofing selection parameters and spoofing

parameters from the platform at start-up or when the platform receives updated spoofing selection or spoofing parameters.

Claim 53. (Currently amended). The computer-readable <u>storage</u> medium of claim 44, further comprising: applying multiple spoofing rules using boolean operators.

Claim 57. (Currently amended). The computer-readable <u>storage</u> medium of claim 44, wherein the profile further includes a parameter for disabling three-way handshake spoofing.
